

MODEL TR2237 SPLIT-SHAFT TRANSFER CASE

Product Description:

Model TR2237 is a 3 stage split-shaft transfer case designed to selectively route vehicle engine power to either the drive-axle (road mode), or to the deck/ancillary equipment (PTO mode). The term split-shaft owes to the through-drive shaft consisting of two separate shafts (split) even though outwardly appearing to be a single shaft. In operation the drive shafts are coupled together by an integral splined clutch for roading and then de-coupled by shifting to PTO at the work site. The integral clutch design provides that shifting to or from either mode simultaneously and fully disengages the other mode.

NOMINAL APPLICATION POWER:	500 HP
TORQUE CAPACITY:	1200 lb-ft. continuous through gears 12500 lb-ft. continuous through drive shaft 17500 lb-ft. momentary through drive shaft
MAX SPEED:	3000 RPM input
RATIO:	1:1 input to top PTO 1.075 input to center PTO
CENTER DISTANCE:	17 inches input to top PTO 8.5 inches input to center PTO
ROTATION:	Top PTO rotates same direction as input Center PTO rotates opposite input
LUBRICATION:	Internal reservoir.
SHIFTING:	Air shift. Mechanical shift option available.
OUTPUT SHAFT SIZE:	2.75-10 straight side spline
COMMON OPTIONS:	SAE and ISO yokes and flanges, disconnects, pump pads, clutches, splined and stub shafts, lube pump.
WEIGHT:	Approximately 600 lbs.
